

Documentation pointing to where motion graphics instances can be found

1. The cat walking back and forth on the desk `index.html:40~74`  
(using Adobe animate to generate the code)
2. Hand coded planes flying across the sky in `custom.js:1~16`  
I took reference from the link below and hand code to customize it.

<https://www.sitepoint.com/community/t/jquery-animate-plane-across-screen-out-left-side-back-in-on-right-side/25726>

(I was trying to fly the plane in css animation in `style.css:46~84` but it didn't look as good as it does now)

3. Click on button to see the line drawing animation of the landmark of each city in `custom.js:34~135`  
(plugin : <http://lazylinepainter.info/>)
4. Call to act animation on the laptop screen in `custom.js:18~33`  
(plugin : <http://albburtsev.github.io/jquery.typist/>)

p.s. Optimised view for 1280×800(13" screen), 1366×768(15"screen), 1440×900(19" screen)
